

STATEMENT

Dear Sir/Madam,

The Arjobex products Polyart Laser & HP Indigo have been tested internally by Arjobex for resistance to bleach (1000ppm concentration) and soapy water.

The concentration of the bleach at 1000ppm meets the requirements of EU Directive 528/2012 that relates to the use of bleach for human hygiene and for use in food/feeding areas.

Both products are resistant to repeated cleaning by both liquids using a soft non-woven cloth, and both the unprinted and printed samples were successfully tested.

It is recommended that a soft cloth is used for cleaning as the use of a more abrasive material such as a kitchen cleaning pad or brush may cause damage to the surface over time in the absence of a varnish or laminate.

Signed

Mark Grimbley
