

Polyart® FOR MENUS

— the synthetic paper —

Why Polyart :

- For its premium printing aspect thanks to Polyart 's special clay coating you get a perfect print result, excellent contrast and clarity of colour to enhance your graphic message.
- Available in iridescent finish : Gold, Pearl Blue and Silver.
- For its durability: resistance to water and grease.
- When laminated paper menus come into contact with water and grease, they absorb easily the liquid through the edges and tend to delaminate. They become discolored which spoils their appearance. As Polyart withstands water and grease your menus remain perfect.
- Resistance to tearing. Polyart offers the long life of plastic and withstands repeated handling, it can be used for menus without lamination.
- Can be printed by all traditional processes and UV Inkjet. Polyart has also special ranges for laser printing and for HP Indigo presses
- Easy to convert: scoring, folding, stitching, hot foil...
- Polyart can be disinfected by wiping it with bleach (concentration 1000 ppm) or soapy water.
- Polyart contributes to the respect of the environment. Recyclable, heavy metal & chlorine-free. Polyart is approved for food contact.

Polyart synthetic paper consists of a matt coated HDPE film manufactured with a proprietary process, that gives the product its specific and unique properties and is recyclable.

It is manufactured by Arjobex a company of the group Polyart.

**Resistant
to tearing & water**

**Excellent
print finish**

**Looks and feels
like paper**

**Does not need
lamination**

 **polyart**
