— the synthetic paper —

## FOR SAFETY / DANGER TAGS

### Why Polyart?

For repairs and maintenance, warning tags with vital information must remain in perfect condition, even when exposed for a long time in harsh environments. Polyart is a perfect solution as it offers the strength and long-life of a film and yet prints and converts like a coated paper.

#### For its strength:

- Polyart resists tearing, elongation and repeated handling
- It is waterproof, resists grease and most chemicals
- Withstands all weather and is UV stable for outdoor use
- Polyart Standard range can withstand freezing temperatures down to -76F without curling or breaking
- Polyart Laser range can withstand hot temperatures up to 284F

#### For its printability:

- Excellent solid color coverage
- Matte coating provides excellent readability
- High opacity film for double sided printing across the range
- Suited to all conventional print processes, UV inkjet and with dedicated ranges for Laser and HP Indigo
- Can be written on with a pen to add information

#### Easy to convert:

- Converting & die-cutting: being an expanded film, Polyart die-cuts and drills easily without dusting issues
- Suitable for eyeletting
- A durable tag with excellent handling characteristics for maintenance operators

Polyart synthetic paper consists of a matte coated HDPE film manufactured with a proprietary process, that gives the product its specific and unique properties. It is manufactured in Europe and the US by Arjobex a company of the Group Polyart.
